Warranty

LIMITED PRODUCT WARRANTY: All Products manufactured by VINCENT ASSOCIATES® (MANUFACTURER) are warranted to meet published specifications and to be free of defects in materials and workmanship as defined in the specifications for 365 days - one year - (WARRANTY PERIOD) from the date of original shipment of the product. DSS series shutters are additionally warranted to achieve two million cycles within the WARRANTY PERIOD (as defined in the CYCLE WARRANTY CRITERION). MANUFACTURER will, at its own option within the WARRANTY PERIOD, repair or replace without charge any listed item discovered to be defective excepting transportation charges. Burned out or otherwise damaged actuator coils are not covered under this warranty. Any defective product returned to the MANUFACTURER must follow the RETURN MATERIAL AUTHORIZATION PROCEDURE as defined below. This warranty does not extend to cover damage resulting from alteration, misuse, negligence, abuse, normal wear and tear, or accident. The MANUFACTURER will consider the return of unused equipment if returned within 30 days from the original date of shipment, subject to a 20% restocking charge. This offer does not apply to used or damaged equipment. This warranty extends only to the original purchase and is not available to any third party, including any purchaser assemblies or other Products of which the goods may become component equipment.

CYCLE WARRANTY CRITERION: One "cycle" is considered one open and one closure of the shutter. DSS Shutter must be operated with the ED12DSS driver or equivalent H-Bridge type shutter driver circuit at +10.7VDC across the actuator coil for the specified duration. DSS Shutter must be operated within the defined environmental, electrical and mechanical specifications as listed on the device's data sheet. After one year (WARRANTY PERIOD), the cycle warranty is null and void. If returned, the device must be accompanied by a written statement indicating the approximate number of cycles contained on the device, include all parameters to which the shutter was operated and follow the RETURN MATERIAL AUTHORIZATION PROCEDURE as defined below.

RETURN MATERIAL AUTHORIZATION PROCEDURE: MANUFACTURER will only accept returned Products from customers that have obtained an RMA (Return Material Authorization) number from the MANUFACTURER. The customer must also include an itemized statement of defect(s). The Product will then be evaluated per the MANUFACTURER'S standard repair guidelines. Any Product which has been returned to the MANUFACTURER but which is found to meet the applicable specifications and not defective in materials and workmanship shall be subject to the MANUFACTURER's standard evaluation charge. The MANUFACTURER assumes no liability for customer returned material.

LIMIT OF LIABILITY: The buyer's exclusive remedy and the limit of MANUFACTURER'S liability for any loss whatsoever shall not exceed the purchase price paid by the buyer for the goods to which a claim is made. MANUFACTURER does not give any implied warranties of merchantability, fitness for a particular purpose, or of any other nature in connection with the sale of any Products.

General Safety Summary

Review the following safety precautions to avoid injury and prevent damage to this product or any products connected to it. To avoid potential hazards, use the product only as specified.

Only qualified personnel should perform service procedures.

Injury Precautions

- Use included Power Supply (PS36) and proper Power Cord To avoid fire hazard, use only the power cord supplied with this product.
- **Avoid Electric Overload** To avoid electrical shock or fire hazard, do not apply a voltage to a terminal that is outside the range specified for that terminal.
- **Avoid Electric Shock** To avoid injury or loss of life, do not connect or disconnect line cord while it is connected to the line voltage.
- Ground the Product This product is grounded through the VDM1000 DC input connector and when using the PS36 is grounded through the grounding conductor of the PS36 power cord. To avoid electrical shock, the grounding connector must be connected to earth ground. Before making connections to the input or output terminals of the product, ensure that the product is properly grounded. DO NOT DEFEAT THE GROUND CONNECTION ON THE PS36 SUPPLIED LINE CORD.
- Access to On/Off Switch Due to the position of the unit's power switch at the rear panel, do not position the unit such that it is difficult to operate the on/off switch.
- **Do Not Operate Without Cover** To avoid electric shock or fire hazard, do not operate this product with the cover removed.
- Use Proper Fuse To avoid fire hazard, use only the fuse type and rating specified for this product.
- **Do Not operate in Wet/Damp Conditions** To avoid electric shock, do not operate this product in wet or damp conditions.
- **Do Not Operate in an Explosive Atmosphere** To avoid injury or fire hazard, do not operate this product in an explosive atmosphere.

Product Damage Precautions

- Use Proper Power Source Do not operate this product from a power source that applies more than the voltage specified. It is recommended to use the PS36 or equivalent DC Power Supply.
- **Provide Proper Ventilation** To prevent product overheating, provide proper ventilation.
- **Do Not Operate with Suspected Failures** If you suspect there is damage to this product, have it inspected by qualified service personnel.

Safety Terms and Symbols

These terms appear in this manual

WARNING

Warning statements identify conditions or practices that could result in injury or loss of life.

CAUTION

Caution statements identify conditions or practices that could result in damage to this product or other property.

These symbols appear on the equipment

ATTENTION – Refer to user manual.

Direct Current – (VDC) Input Only

Avertissements de sécurité

Ces termes et illustrations apparaissent dans le manuel.

AVERTISSEMENT

Le titre AVERTISSEMENT indique une situation où, si l'avertissement est ignoré, de graves blessures ou la mort peuvent en resulter.

PRUDENCE

Le titre PRUDENCE indique une situation où, si l'on ne fait pas attention, cela risqué d'entraîner des dommages à l'équipement ou à d'autres propriétés.

Ces symboles sont présents sur l'équipement

ATTENTION – Se référer au manuel d'utilisation.

Courant Direct - Tension Continue seulement (VDC) à l'entrée.

Preface

This Manual provides information for the **VDM1000 Shutter Drive**r. The manual contains the following chapters:

- *Getting Started* contains a brief product description, information needed to power on the driver and a brief procedure to verify that it functions.
- *Operator Controls* provide an outline of the panel control functions and locations at the front and rear panels. This also includes the location and function of the input/output signals.
- Operating Basics gives further details to the operational features of the controller.
- *Specifications* are described for all input/output levels including other pertinent details and information required for the RS-232C interface.
- *Index* contains a full index.

What follows is the complete operator's manual for the UNIBLITZ[®] N-CAS[®] VDM1000 Shutter Driver. Please read this manual completely before operating the unit. Due to the construction of this unit, Vincent Associates recommends that the unit be returned to the manufacturer for repair. There are no user-serviceable parts inside.

Getting Started

Features

- CE/UL/CSA certifications.
- Microprocessor controlled
- RoHS Compliant
- Operates **N-CAS**[®] shutters purchased in a bi-stable or uni-stable configuration.
- 5-pin Female SwitchCraft locking shutter interface connector.
- **510A** shutter interconnect cable included for NS series shutters. (5-pin male SwitchCraft to 5-pin female SwitchCraft , 3 meters)
- Operates existing *UNIBLITZ* shutters such as CS, LS, VS and XRS series. The optional **710A** interconnect cable is required when connecting these shutter types. This cable is not included and can be purchased separately.

- Normally open or normally closed shutter operation in uni-stable mode.
- Indicators for power, driver, and SYNC status.
- Exposure determined by external pulse (BNC, TTL) or switch contact closure to the PULSE INPUT BNC.
- SYNC OUTPUT BNC can be selected for either active-low or active-high operation.
- PULSE INPUT BNC can be selected for either active-low or active-high operation.
- RS-232C input and output connection accessible via dual RJ45 jack.
- Input and output controllable via RS-232C interface.
- RS-232C input addressable via 8 selectable addresses.
- Up to 8 units can be controlled independently from one computer serial port.
- Units can be easily daisy-chained together with optional RJ45 cable, Model **810RJ** (not included).
- Status of electronic synchronization available from SYNC OUTPUT BNC (TTL) and can be read back from RS-232C interface.
- Synchronization system can be disabled via user-selectable FUNCTION switch.
- Selectable pulse energy for operation of 35 mm and larger aperture shutter devices.
- Selectable pulse high current duration for specific shutters via 8-position octal switch.
- Aluminum enclosure with air slots for ventilation.
- Internal fuse protection for all DC output voltages (including shutter).
- Operates on +36VDC, fuse protected.
- Power input to controller via 2.0 mm DC jack.
- +36V DC, 1.83A, external power supply, Model PS36 (included). Power input to supply 100-240 VAC 50/60 Hz. Power supply is UL/CE certified.
- Size (HWD): 1.96 x 4.34 x 7.23 in. (49.9 x 110.3 x 183.6 mm) controller
- Size (HWD): 1.80 x 3.00 x 5.8 in. (45.7 x 76.2 x 147.3 mm) power supply
- Weight (controller): 1.2 lbs (0.54kg)
- Weight (power supply): 1.1 lbs (0.50kg)

Introduction

The **VDM1000** is the optimal driver for the new *UNIBLITZ* ® N-CAS®, NS series shutters. It carries CE/UL/CSA certifications and conforms to the listed directives and standards. Please see the Specifications section elsewhere in this document for specific information. The driver has user-selectable FUNCTION switches allowing it to handle a variety of shutter configurations. It will operate an N-CAS shutter configured as uni-stable (normally open or normally closed), or bi-stable where no power is required to hold the shutter open or closed. In addition to this capability, the N-CAS drive circuit can be disabled, allowing the **VDM1000** to operate standard CS, LS, VS and XRS series shutters.

Simple and straightforward Front Panel controls allow the **VDM1000** to be easy to use and configure. LED indicators indicate shutter status at a glance. A toggle switch allows easy selection of normally-open or normally-closed operation. Addressable RS-232C control is also available via the dual 8-pin RJ45 jack. Daisy-chain multiple **VDM1000** units together by connecting the RJ45 output of one controller to the RJ45 input of the next controller in the chain (using an **810RJ** cable). The unit's specific address in the chain is selected via the ADDRESS rotary octal switch allowing up to eight units to be individually controlled via one computer serial port.

The Rear Panel contains BNC connectors for PULSE INPUT as well as an output for the electronic synchronization, SYNC OUTPUT. The BNC connectors allow for quick termination of TTL command signals. Power is supplied to the **VDM1000** via 2.0 mm male jack from the plug of the external power supply, center terminal is positive. The PS36 Power supply is included with the **VDM1000** to provide power, however, an equivalent user-supplied power supply can also be used. The Shutter output is a female 5-pin push-lock SwitchCraft connector. A bank of user-selectable FUNCTION switches is accessible on the right side panel of the enclosure. These switches will set the **VDM1000** in a number of configurations to allow a number of shutter types to be driven. The right-side panel octal switch establishes pulse duration, and the FUNCTION switches control and pre-set the unit for the specific shutter used.

A 3-meter, 5-pin female to 5-pin male SwitchCraft push-lock shutter interconnect cable, Model **510A**, is also included with each unit.

Start Up

After unpacking your unit inspect for any defects. If upon inspection a problem is found, or a part (or parts) is missing, notify Vincent Associates immediately.

CAUTION

Be sure the line cord provided with the included PS36 power supply is being used. Please note that proper line cords are included for both Domestic (USA) and Overseas (EU). If the included EU line cord is not compatible, please use a line cord rated for 230VAC, minimum 1A, and minimum 0.75 mm² conductor size. The maximum cord length is 3 meters.

PRUDENCE

Veuillez vous assurer que le cordon d'alimentation utilisé est celui qui est fourni avec le bloc d'alimentation PS36. Notez que des cordons d'alimentation sont fournis pour une utilisation Domestique (USA, Canada) ou Européenne (EU). Si le cordon d'alimentation EU n'est pas compatible avec votre prise murale, veuillez utiliser une cordon classé pour tension de 230VAC, minimum 1A, dont la surface de conducteur minimum est 0.75 mm². La longueur du cordon d'alimentation ne doit pas dépasser 3 mètres.

After the initial inspection the unit is ready to use. To properly install and power on the **VDM1000**, perform this procedure:

- 1. Verify that the **VDM1000** power rocker switch is selected to the "0" position and the line end of the PS36 power supply's line cord is not connected to the AC line.
- 2. Connect the 2 mm power plug of the PS36 power supply to the DC power input of the **VDM1000**. Be sure the AC cord is inserted completely into the AC module receptacle of the PS36 power supply.
- 3. Connect the power end of the line cord to the AC line.
- 4. Power unit ON by rocking the power switch to the "1" position. Power LED indicator will illuminate.
- 5. Due to the position of the unit's power switch at the rear panel, **do not** position the unit such that it is difficult to operate the On/Off switch.

Initial Operation and Testing

The **VDM1000** will operate from the supplied +36VDC, PS36 power supply or equivalent user-supplied power supply. The PS36 will operate from 100 to 240VAC (50/60Hz), this is automatically selected.

CAUTION

Be sure power switch of the VDM1000 is in the off position before connecting PS36 power supply's AC plug to the line. Attach line cord to the unit first before plugging into the AC power source.

PRUDENCE

Veuillez vous assurer que l'interrupteur d'alimentation du VDM1000 est en position Éteinte (OFF) avant de brancher le bloc d'alimentation PS36 à la prise secteur AC. Il faut brancher le cordon d'alimentation à l'appareil avant de le raccorder à la source de tension.

See **Start Up** section for connection to power source. Insert the 5-pin male SwitchCraft connector of **510A** shutter interconnect cable into 5-pin female SwitchCraft receptacle at rear of unit labeled SHUTTER. Connect the 5-pin female connector of the Model **510A** shutter interconnect cable to 5-pin male connector on shutter to be driven.

Place POWER switch to the ON "1" position, the POWER LED will illuminate. Place the N.O./N.C. switch to the N.O. position. The shutter will open and remain open until the switch is returned to the N.C. position. The DRIVER LED will illuminate when this switch is in the N.O. position. The operation of the shutter described assumes that the FUNCTION switches are set up for the proper shutter used, uni-stable, bi-stable or CS, LS, VS or XRS types. Please see **FUNCTION Select** under GENERAL CHARACTERISTICS.

All *UNIBLITZ* drivers provide the circuitry necessary to support shutters equipped with the solid state synchronization option. Simply plug the shutter-interconnect cable into the driver. If your shutter is equipped with this option, the yellow LED, labeled SYNC, will illuminate when the shutter is in the open position. In addition, the SYNC OUTPUT BNC will change to the active state when the shutter is open. The absence of the solid state synchronization option will only inhibit the operation of the SYNC output and SYNC LED. The remainder of the **VDM1000** systems will not be affected. In addition, the synchronization system can be disabled by sliding the FUNCTION switch **E** to the upper position.

See SPECIFICATIONS and OPERATOR CONTROLS for additional operational information concerning other systems of the **VDM1000**.

Should the shutter and/or control not respond as described previously, be sure the DC power plug from the PS36 power supply is properly seated into the DC power input jack and connection to

the shutter are made properly to the rear of the controller. Be sure the line cord is installed into the PS36 input power receptacle.

CAUTION

Turn off the unit and remove the plug from the AC source before removing the dc power plug from the VDM1000

PRUDENCE

Veuillez éteindre l'appareil en mettant l'interrupteur de tension è la position étenite (OFF), et retirer la fiche de la source de tension AC avant de retirer la fiche de tension DC du côté du VDM1000.

Be advised, all fuses are internal to the unit. It is recommended that if a fuse blows, to return the unit for fuse replacement. Also, particular shutter units respond to different minimum pulse widths. For example, a standard NS25S uni-stable shutter has a minimum exposure pulse of 13ms. If the exposure PULSE INPUT is set for an exposure pulse width less than 13ms, the shutter may not open fully. If the unit still does not operate properly, please notify Vincent Associates immediately.

Operator Controls

VDM1000 Front Panel Operator Controls

Please Refer to Figure 1.

1. **RS-232C** Dual RJ45 female jack.

Provides access to the **VDM1000** RS-232C interface allowing the user to control functions via commands sent from a computer serial COM port. The INPUT jack accepts commands directly from a computer's serial port or from another **VDM1000** in the daisy-chain. The OUTPUT jack allows the controller to send commands to the next controller in the daisy-chain. Synchronization read back is only available when a single unit (talk/listen) is being controlled through the RS-232C input. If multiple units are daisy-chained, only commands sent will operate the chained devices (listen only).

2. **DRIVER** LED indicator.

A green LED indicating when the internal shutter driver circuit input has an active signal present.

3. **SYNC** LED indicator.

Indicates status of Solid State Synchronization output. This yellow LED is illuminated when shutter's electronic sync is activated. Functions only if the shutter used is equipped with the Solid State Synchronization system.

4. **POWER** LED indicator.

A green LED indicating that power is being provided to the unit.

5. **N.O./N.C**. Toggle switch.

The N.O./N.C switch acts to invert the shutter operation. The position of this switch determines shutter status BEFORE a trigger signal is received by **VDM1000**. In the N.C. position the shutter will be activated open by an input pulse signal. In the N.O. position the shutter will be activated closed.

6. **ADDRESS** Select switch.

Rotation of the 8-position octal rotary switch selects the active RS-232C address of the unit. See **ADDRESS Select** under GENERAL CHARACTERISTICS.

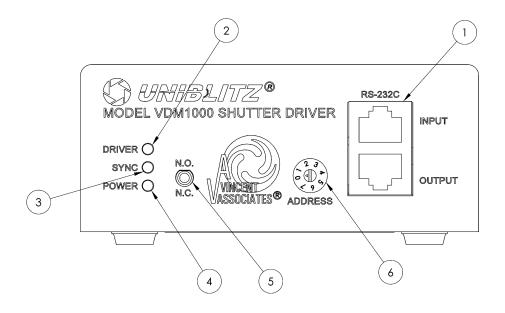

Figure 1: VDM1000 Front Panel Operator Controls

VDM1000 Rear Panel Operator Controls

Please Refer to Figure 2:

1. PULSE INPUT BNC.

Allows control of the shutter exposure and frequency from a TTL signal source. The pulse duration determines the shutter exposure interval. The frequency of the signal presented to this input determines the frequency of shutter exposures. This input can be set active-high or active-low by FUNCTION switch **A**. See **FUNCTION Select** under GENERAL CHARACTERISTICS.

2. **SYNC OUTPUT** BNC.

This output is for shutters equipped with the Electronic Synchronization System option. The shutter's internal sync circuit sets the BNC output to an active state when the sync circuit becomes active. The output goes active when the shutter reaches 80% of full open, and goes to the inactive state when the shutter reaches 20% closed. The front panel SYNC LED illuminates when the shutter's electronic sync is active. This output can be disabled with FUNCTION switch **E**. The SYNC output can be set active-high or active-low by FUNCTION switch **B**. See **FUNCTION Select** under GENERAL CHARACTERISTICS.

3. **ON/OFF** Power Switch.

Power switch - "0" is OFF, "1" is ON

4. **DC POWER** Connector.

2 mm jack for power input. Center terminal is PLUS (+).

5. **SHUTTER** Output.

A 5-pin SwitchCraft female push-lock type receptacle mates with the 5-pin SwitchCraft male plug of the **510A** (3 meter) interconnect cable included with the unit. Pin-out as follows, wire colors indicate **510A** cable and shutter wiring layout, respectively:

Connector	Description	Shutter	510A
Pin 1	Shutter Actuator Drive Output	Red	Red
Pin 2	Shutter Actuator Drive Output	Brown	Black
Pin 3	+5.0VDC Power Supply Output	Blue	White
Pin 4	SYNC Ground	Green	Green
Pin 5	SYNC Detector Transistor Input	Yellow	Orange
Shell	Shutter Ground	Black	Drain

Table 1: 5-Pin SwitchCraft Female Receptacle Pin-Out

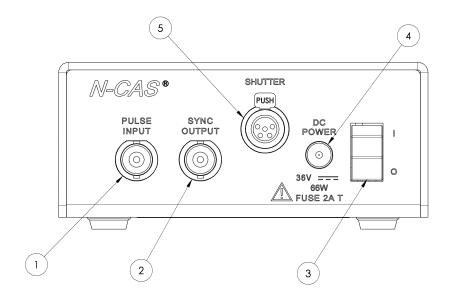

Figure 2: VDM1000 Rear Panel Operator Controls and I/O

VDM1000 Right Hand Panel Operator Controls

Please refer to Figure 3.

1. **PULSE DURATION:** An 8-position octal switch that allows the selection of different pulse voltage durations in units of milliseconds (ms). See **PULSE DURATION Select** under GENERAL CHARACTERISTICS.

			Puls	e Durat	ion Oct	al Switc	h Locat	ions	
Mode of Operation	0	1	2	3	4	5	6	7	
Uni-stable, low energy	3/3	6/6	10/6	15/8	20/10	25/12	30/15	35/18	(drive/return)
Uni-stable, high energy	20/10	30/15	40/20	50/25	60/30	70/40	80/50	90/60	(drive/return)
Bi-stable, low energy	3/3	6/6	10/10	15/15	20/20	25/25	30/30	35/35	(drive/return)
Bi-stable, high energy	20/20	30/30	40/40	50/50	60/60	70/70	80/80	90/90	(drive/return)
Return Disable, low energy	3	6	8	10	12	15	20	25	(drive only)
Return Disable, high energy	20	25	30	35	50	70	90	120	(drive only)

Table 2: VDM1000 Octal Switch Pulse Duration Settings

- 2. **FUNCTION** Switches: Six edge actuated piano-DIP slide switches.
 - a. Switch **A** is used to select the active state of the PULSE INPUT BNC connector.
 - b. Switch **B** is used to select the active state of the SYNC OUTPUT BNC connector. See **FUNCTION Select** under GENERAL CHARACTERISTICS.
 - c. Switch C allows the user to select between uni-stable and bi-stable modes for the NS series shutters. In the upper position switch C selects the bi-stable mode.
 - d. Switch **D** allows the user to disable the Return Driver circuit. CS, LS, VS, and XRS series shutters do not require the Return Driver circuit, so when driving these types be sure to disable the return circuit. In the upper position switch **D** disables the return driver while the lower position enables the drive circuit for NS series shutters.
 - e. Switch **E** allows the user to disable the electronic synchronization circuit. In the UP position it disables the electronic sync, which then shuts off the infrared emitter internal to the shutter, which in turn disables the SYNC OUTPUT.
 - f. Switch **F** is used to select the proper pulse energy for the shutter being driven. Unless otherwise instructed by the actual shutter type used, switch to the HIGH (up) position for 35mm aperture and larger types, switch to the LOW (down) position for all other shutter types. See chart below and in **FUNCTION Select** section of GENERAL CHARACTERISTICS.

A summary of the DIP Switch FUNCTION settings is provided below.

		Pos	Position			
Function	DIP Switch	h Lower	Upper			
PULSE INPUT	Α	active-low	active-high			
SYNC OUTPUT	В	active-low	active-high			
Bi-stable Mode	С	disabled	enabled			
Return Driver	D	enabled	disabled			
SYNC Sensor	E	enabled	disabled			
Pulse Energy	F	25 mm & under	35 mm & over			

Table 3: FUNCTION DIP Switch Settings

Please see the table below for recommended function & octal switch settings for all available shutter series.

	Function Switch ¹						
Shutter Series	\mathbf{A}^{2}	\mathbf{B}^2	C	D	E	F	Octal Switch Pulse Duration

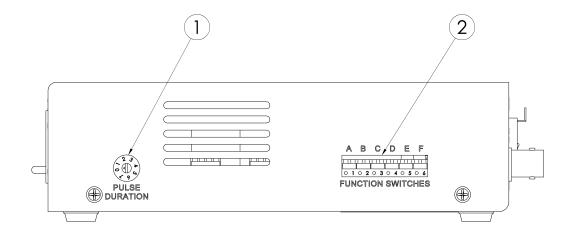

Figure 3: VDM1000 Right Hand Panel Operator Controls

Notes

Operating Basics

Refer to the section describing the **Initial Operation and Testing** for initial preparation to put the **VDM1000** into operation.

Function Switches

There are six piano-DIP slide switches located at the right side panel and labeled FUNCTION.

For specific functions see **FUNCTION Select** under GENERAL CHARACTERISTICS.

The switch actuators can be moved to the up or down position with a small non-metallic tool.

Be sure the power is off and disconnected from the unit before attempting to change the FUNCTION switch settings.

1. Switches **A** and **B** allow the user to select the active state of the BNC input and the BNC output, respectively. Switch A must be in lower (active-low) position to activate the input from a remote activate cable such as the **710R** (handheld) or the **710R/F** foot activated.)

CAUTION

Do not connect a 710R/F to the SYNC OUTPUT BNC. This will damage the SYNC OUTPUT.

- 2. Switch C is used to select either uni-stable or bi-stable mode for NS Series shutters.
- 3. Switch **D** is used to enable or disable the RETURN DRIVER circuit.

PRUDENCE

Ne branchez pas le câble 710R ou le 710R/F aux connecteurs des sorties BNC de l'appareil, car cela va endommager le circuit de la sortie.

- 4. Switch **E** will allow the user to disable the electronic synchronization circuit. Slide switch to the up position to disable the electronic synchronization circuit. This shuts off the infrared emitter internal to the shutter, which in turn disables the SYNC OUTPUT BNC.
- 5. Switch **F** selects HIGH/LOW pulse energy. HIGH energy is required to operate the 35mm and larger aperture shutters. In the down (Lower) position the pulse energy is selected LOW. When the switch actuator is in the up (Upper) position, the pulse energy is selected HIGH.

CAUTION

The HIGH energy setting must be used for only the 35mm and larger aperture shutters. Use the LOW position for all other **UNIBLITZ** shutters. Use of the <u>HIGH</u> position for shutter apertures smaller than 35mm will damage the shutter used and will void the limited warranty.

PRUDENCE

Le réglage d'énergie d'impulsion "HIGH" ne doit être utilisé que pour les obturateurs d'un diamètre de 35mm ou plus. Veuillez utiliser le réglage "LOW" pour tous les autres obturateurs Uniblitz. L'utilisation du réglage "HIGH" pour des obturateurs d'un diamètre plus petit que 35mm va endommager l'obturateur et annuler la garantie limitée de l'obturateur

RS-232C Operation

The **VDM1000** inputs can be controlled via an RS-232C computer serial signal (COM port). From a computer's RS-232C serial port, connect a cable such as the **810RJ** (not supplied) or a user-constructed cable with connections as enumerated in the INPUT SPECIFICATIONS to the unit's RS-232C interface. The RS-232 input is configured in the *null modem configuration*.

Connect the Tx (transmit) from the host to the Rx (receive) on the **VDM1000** control unit. All other lines are not used except for the Ground connection.

When using the **810RJ** cable, the **910RJF** adapter is required to connect the **VDM1000** to the host computer. The **910RJF** adapter is included as part of the **810RJ** cable assembly.

If the host contains a 25-Pin D-sub or an 8-Pin Mini-DIN, check the computer's user manual to find the proper corresponding pin-outs. A cable will need to be constructed or a proper adapter purchased to connect the **810RJ** to the host. In most cases the corresponding 25-Pin D-Sub pin out and MAC 8-Pin Mini-DIN are as follows:

Function	Name	RJ45 Input	RJ45 Output	IBM DB-9M	IBM DB-25M	MAC Mini-DIN-8F
Rx	Receive Data	5	5	2	3	5
Tx	Transmit Data	6	6	3	2	3
GND	Signal Ground	4	4	5	7	4

Table 5: VDM1000 RS-232C Pin-Outs

All other pins are not used. Be sure to connect the Tx pin (Pin 3) from the IBM 9-Pin D-Sub or Pin 2 from the 25-Pin D-Sub male connector to the Rx pin (Pin 5) of the **VDM1000** RJ45 INPUT jack for proper operation. Connect all other functions as indicated above.

By sending the proper commands, the unit will respond by activating the proper function. The **RS-232C Test Program** listed below will allow operation of the **VDM1000** from the computer keyboard.

Daisy-Chain Configuration

Up to eight **VDM1000** units can be daisy-chained together through the same serial port using a Model **810RJ** cable for each controller in the chain. Figure 4 illustrates connecting two controllers from a single serial port. Once connected, each unit will require a unique address in the chain. This is accomplished by adjusting the octal switch beneath the Dual RJ45 connector on the front panel to the desired address. See **ADDRESS Select** under GENERAL CHARACTERISTICS in the SPECIFICATIONS section for a complete listing of the command range for each octal switch position. The specific *local* command range set will decode commands sent via the serial port. A set of *global* commands is also available to control all units connected to the serial port.

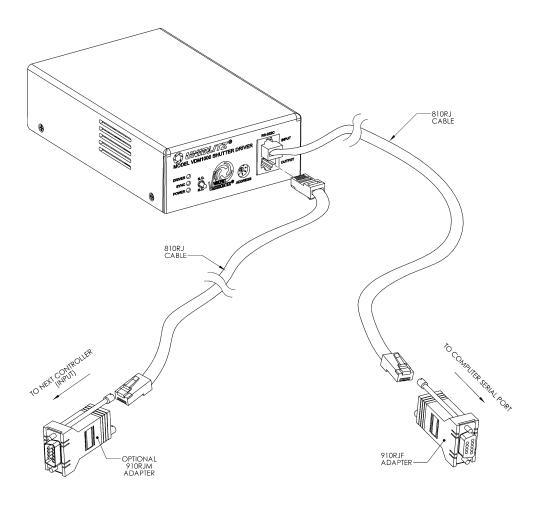

Figure 4: VDM1000 Shutter Driver Daisy-Chain Cable Configuration

The following is a test program written to test the input commands to the RS-232C interface of the **VDM1000** controller. This program and LabView programs (not listed) are available by downloading from the **RESOURCES** section of our web site (www.uniblitz.com), request via e-mail (vincentassociates@uniblitz.com), or calling (800) 828-6972. Other programs may be available, please contact technical support for further information.

Trigger Cautions and Trouble Shooting Tips

- 1. The **VDM1000** system's capability can be greatly enhanced by external control as described previously, however, extreme care must be taken to ensure that high voltages (see SPECIFICATIONS) are not inadvertently switched into external control inputs. Also, note that large negative voltages can cause irreparable damage to the unit's internal circuitry. Exercise extreme caution.
- 2. As noted previously, a visual inspection of a fuse is usually NOT an adequate test to determine if a fuse failure has occurred. Use a DMM (Digital Multi-Meter) or equivalent test device to determine fuse continuity.
- 3. Particular shutter units respond to different minimum pulse widths. For example, a standard VS25 shutter (with Teflon shutter blades) has a minimum exposure pulse of 6 msec. If the exposure or pulse width presented to the VDM1000's PULSE INPUT is less than 6 msec, the shutter may not open fully. If the unit still does not operate properly, when using the proper pulse width, please notify Vincent Associates immediately.
- 4. When operating shutters with a larger aperture than 25mm (35 mm or larger), please be sure that the FUNCTION slide switch **F** is positioned to the Upper position. Failure to make this change will result in the shutter not opening fully when triggered or opening fully and immediately returning to the closed position thereby risking failure or loss of capture.
- 5. When operating shutters with a 25mm aperture or smaller, please be sure that FUNCTION slide switch **F** is in the Lower position. Use of the Upper position for 25 mm and smaller aperture devices could cause irreparable damage to the shutter used and WILL void the shutter's limited warranty.

Dimensions

The overall dimensions of the VDM1000 Shutter Controller and Power Supply are shown below in Figures 5 and 6, respectively.

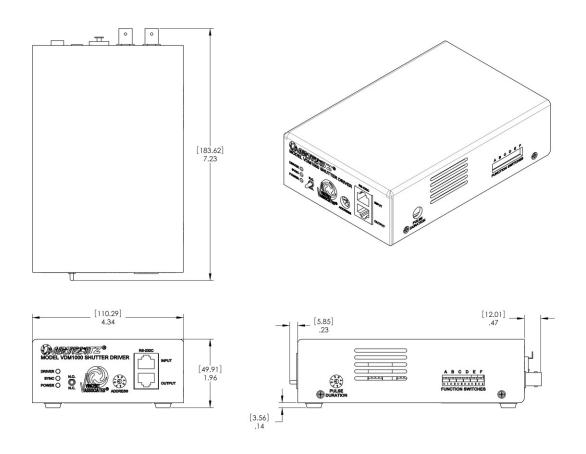

Figure 5: Overall VDM1000 Dimensions

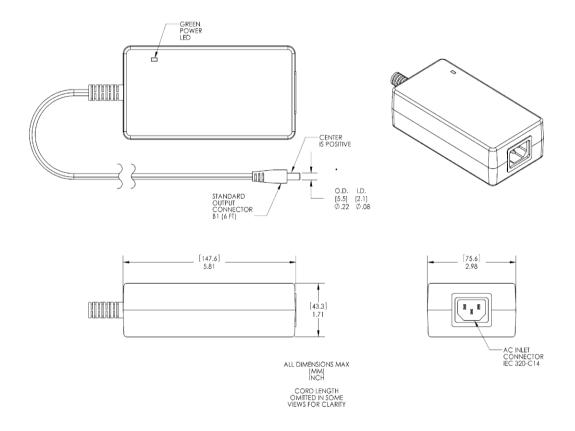

Figure 6: Overall PS36 Power Supply Dimensions

Maintenance

Proper care and maintenance of the unit should be taken as with any electronic instrument.

With the exception of line and shutter fuse replacement, there are no user-serviceable parts outside or inside of the **VDM1000**.

There is no service to be performed by the user other than exterior inspection for visible damage of the case and line cord and exterior cleaning.

Although the stability of the timing and drive voltage is assured and calibrated prior to shipment, it may become necessary to make some minor adjustments to the operating systems of the **VDM1000** over time.

WARNING

It is highly recommended that if you suspect a problem with your unit, that it be returned to the factory for proper adjustments and calibration. The unit's complicated circuitry will be damaged and/or not function as specified if inadvertently adjusted improperly.

AVERTISSEMENT

Il est fortement recommandé de retourner l'appareil à l'usine si l'on suspecte un problème quelconque, afin qu'une callibration et que des ajustements appropriés y soient effectués.

General Care

Perform routine inspection of the **VDM1000** on a regular basis.

Inspect the outer case for any signs of visible damage.

Pay particular attention to the condition of the power supply line cords. If there are any signs of damage or deterioration, replace immediately with an approved line cord.

Follow the Exterior inspection and Cleaning Procedures below.

Inspection and Cleaning

Inspection - Exterior

Inspect the outside of the **VDM1000** for damage, wear, and missing parts. A device that appears to have been dropped or shows other signs of exterior damage should be checked thoroughly to verify correct operation and performance. If damage is suspected, please return the unit to the factory for repair – there are no user-serviceable parts.

Cleaning Procedure - Exterior

1. Remove loose dust on the outside of the **VDM1000** with a lint free cloth.

CAUTION

To prevent getting moisture inside the unit during external cleaning, use only enough liquid to dampen the cloth or applicator.

PRUDENCE

Lors d'un nettoyage fin , afin d'éviter d'introduire de l'humidité à l'intérieur de l'appareil, n'utilisez que le strict nécessaire de liquide pour humecter le linge ou l'applicateur utilisé pour le nettoyage.

- 2. Remove remaining dirt with a lint free cloth dampened in a general purpose detergent-and-water solution. Do not use abrasive cleaners.
- 3. Avoid the use of chemical cleaning agents that might damage the painted finish of the controller's housing. Use only a dry, lint free cloth to wipe down the unit. DO NOT USE ALCOHOL TO CLEAN THE PANELS THIS WILL REMOVE THE SCREEN PRINTING FROM THE PANELS. Before using any other type of cleaner, consult your factory representative.

Inspection – Interior

Do not attempt to open the case of the **VDM1000**. There are no other user-serviceable parts inside the case.

Cleaning Procedure - Interior

Do not attempt to open the case of the **VDM1000**. There are no other user-serviceable parts inside the case.

Specifications

System Characteristics

Name	Description
Repeat Exposure	 10 ms minimum between exposures for 25 mm (aperture diameter) and smaller shutters 20 ms minimum for 35 mm aperture and larger shutters
Shutter Drive	 Continuously variable frequency of exposures from DC to the shutter's maximum rate Maximum peak pulse power: 91 W Pulse voltage: +33 VDC Pulse current: 2.75 A (test conditions: standard 5 Volt, 12 ohm coil cycled with 20 ms exposure at 5 Hz)
Power Supply	 External tabletop switching supply Output: +36VDC, 1.83A, 66W Input: 100-240 VAC, 50/60 Hz, 1.5A IEC type inlet Output: 2 mm DC plug, Center is positive

External Input Characteristics

Name	Description
PULSE INPUT (BNC) Rear Panel	 Active-low or active-high selectable with FUNCTION switch A Input impedance: 4.7K ohms Maximum source current: 100 μA Maximum sink current: 1μA Minimum pulse width determined by applicable shutter Maximum pulse width unlimited TTL compatible: Minimum high-level: +2.0 VDC Maximum low-level +0.8 VDC
RS-232C INPUT (Upper RJ45 Jack) Front Panel	 Baud rate 9600 8 Data bits 1 Stop bit No Parity No flow control "Null-modem" type input 3 input commands recognized 2 output read-backs available (requires SYNC sensor of applicable shutter to be present) 1 global, 8 local address locations for commands (see ADDRESS Select specification for octal-switch settings of local address locations) Command transmission time: 0.94 ms. See sample RS-232 test program.
RS-23	32 Global Address Code Locations
Commands	Decimal HEX Octal Binary ASCII
Check-Sync	63 3F 077 00111111 ? (receive data) 64 40 100 01000000 @ (receive data)
Open Close	64 40 100 01000000 @ (receive data) 65 41 101 01000001 A (receive data)
Indicates SYNC On	74 4A 112 01001010 J (transmit data)
Indicates SYNC Off	75 4B 113 01001011 K (transmit data)

External Output Characteristics

Name	Description
SYNC OUTPUT (BNC) Rear Panel	 Active-low or active-high selectable with FUNCTION switch B Source impedance: 1K ohms Maximum source current: 6.8 mA Maximum sink current: 25 mA Maximum low-level: +0.5 VDC Minimum high-level: +4.5 VDC. This output becomes active when applicable shutter is equipped with electronic synchronization sensor.

RS-232C OUTPUT	Baud rate 9600
(Lower RJ45 Jack)	8 Data Bits
Front Panel	1 Stop Bit
	No Parity
	No flow control
	DTE type output
	 This output provided for daisy-chain application of up to 8 VDM1000 (or VCM/VRM series) controllers.

General Characteristics

Name	Description
POWER Indicator Front Panel	Green 3mm LED indicates when DC power is present.
DRIVER Indicator Front Panel	 Green 3mm LED indicates when the shutter driver circuit is active. This LED will illuminate with or without the load of a shutter's actuator coil.
SYNC Indicator Front Panel	 Yellow 3mm LED indicates when a shutter's electronic synchronization sensor is active. SYNC OUTPUT (BNC) will be active only when this LED is illuminated. Shutter used must have the electronic SYNC option installed.
ADDRESS Select (Octal rotary-DIP switch) Front Panel	 8-position octal switch allows selection of individual (local) address locations for input commands sent by a computer's serial port. Output commands do not apply for local selections 0 to 8 Used for daisy-chain application from one computer (host) serial port.
RS232C Commands	ADDRESS Switch Decimal Locations (x = don't care)
Check-Sync Open Close Indicates SYNC On Indicates SYNC Off	X 0 1 2 3 4 5 6 7 63 127 143 159 175 191 207 223 239 (Decimal) 64 128 144 160 176 192 208 224 240 (Decimal) 65 129 145 161 177 193 209 225 241 (Decimal) 74 N/A N/A N/A N/A N/A N/A N/A (Decimal) 75 N/A N/A N/A N/A N/A N/A N/A (Decimal)

General Characteristics (cont'd)

Name	Description
FUNCTION Select (6-position piano DIP switch) Right Side Panel	 A 6-position DIP switch used for configuration of different operating modes. Switch A allows selection of active-low or active-high state for the Pulse Input BNC. Switch B allows selection of active-low or active-high state for the SYNC Output BNC. Switch C enables the driver circuits for bi-stable operation, default is uni-stable operation. Switch D disables the return driver circuit (CS/LS/VS/XRS series shutters). Switch E disables the synchronization sensor of a shutter. Switch F allows the selection of additional pulse energy for the 35 mm and larger shutters.
Function PULSE INPUT SYNC OUTPUT Bi-stable Mode Return Driver SYNC Sensor Pulse Energy	DIP Switch Position DIP Switch Lower Upper A active-low active-high B active-low active-high C disabled enabled D enabled disabled E enabled disabled F 25 mm & under 35 mm & over
PULSE DURATION Select (Octal Rotary Switch) Right Side Panel	 8-position octal switch allows selection of different pulse voltage durations in units of msec. Applies to Uni-stable, Bi-stable, and Return Disable modes of operation. Return driver durations do not apply to Return Disable mode.
Mode of Operation Uni-stable, low energy Uni-stable, high energy Bi-stable, low energy Bi-stable, high energy	PULSE DURATION Switch Locations (values in msec) 0 1 2 3 4 5 6 7 3/3 6/6 10/6 15/8 20/10 25/12 30/15 35/18 (drive/return) 20/10 30/15 40/20 50/25 60/30 70/40 80/50 90/60 (drive/return) 3/3 6/6 10/10 15/15 20/20 25/25 30/30 35/35 (drive/return) 20/20 30/30 40/40 50/50 60/60 70/70 80/80 90/90 (drive/return)
